

Engineered Assemblies Built for Demanding Applications

At Paige OEM—a GCG Company—we bring you the power of GCG Assembly's proven capabilities.

From custom cable assemblies to turnkey solutions, we deliver precision, performance, and peace of mind. Serving OEMs, industrial manufacturers, and renewable energy developers, our engineered assemblies meet exacting standards for quality, durability, and scale—backed by deep testing and decades of expertise.

What Sets GCG Assembly Apart

Engineered Solutions, Not Off-the-Shelf Compromises

Our in-house engineering team collaborates with your technical experts to close the SME gap, applying application-specific design thinking and drawing on a proprietary library of proven custom configurations.

Extensive Testing for Real-World Reliability

Every solution is validated through rigorous electrical and physical testing to ensure performance where it matters most:

- **Electrical:** Hipot, continuity, insulation resistance
- **Physical:** Pull force, heat aging, cold bend, flex and tensile testing
- **Environmental:** High-pressure water ingress, cold impact, cable track testing

Built for Industrial and Renewable Markets

From automation systems to utility-scale solar projects, our assemblies are built for tough environments and mission-critical operations. Whether you're manufacturing advanced equipment or powering the future with renewables, we deliver assemblies that last longer, perform better, and help you move faster.

Applications Include:

- Automation & Robotics
- Packaging & Material Handling
- HVAC Systems
- Motors, Pumps & Compressors
- Lighting & Control Panels
- Solar Combiner Boxes & Battery Storage
- Renewable Site Control Systems

Let's Build What's Next—Together

Contact us today to see how our engineered assemblies can streamline production, enhance reliability, and reduce downtime in your operations.
